

AuSCR Research Task Group approved projects

Title	Telephone follow-up interviewing in a national stroke registry – a process evaluation of respondent comments
Principle investigator	Ms Karen Moss
Institute	The Florey Institute of Neuroscience and Mental Health
Co-investigators	Associate Professor Dominique Cadilhac, Associate Professor Natasha Lannin, Ms Brenda Grabsch
Submission date	22 November 2013
AuSCR role	Data provision
Approved	23 February 2014
Status	Completed
Summary	<p>It is proposed that this article would be a reflection piece around respondent comments noted during AuSCR telephone follow-up interviews over approximately a one year period (from October 2012). Rich data are often available through the spontaneous remarks of either registrants or their proxies (e.g. carers/family members). These data could be used as part of process evaluation for this aspect of the registry operations and to inform follow-up procedures for AuSCR, and potentially other registries or research projects.</p> <p>The aim of this paper is to illustrate the strengths and limitations of telephone interviewing in a health registry for people who choose not to return mailed surveys. Research questions could include why people fail to respond to mailed-out questionnaires and what are some examples of patient/carer perceptions about the questionnaires and the registry.</p>
